

**SOCIETY OF PETROLEUM GEOPHYSICISTS**

**ASSOCIATION OF PETROLEUM GEOLOGISTS**

Vadodara Chapters of SPG & APG have been contributing to the development of geoscientists based in the city of Vadodara by organizing talks, lectures, workshops and field expeditions. To further this endeavor, a geological field tour to Naswadi and nearby areas was organized on 6<sup>th</sup> February, 2016 for the members.

The area is host to different geological features such as angular unconformity between Nimar Sandstone Formation and the Champaner group of rocks near Naswadi village at the hilltop. Nodular, Oyster and Coralline Limestone at a very small distance from each other could be seen near Uchad village. The rippled sandstone with each of the several packs preserving the ripple marks were also visible in this section. A road cut section near Bhadarwa was a treat to watch as one could see the alternations of highly fractured Sandstone and Shale with varying thicknesses.
