

The Leading Edge 2019 Special Section on India: Invitation for Abstracts

In April 2019, the SEG's *The Leading Edge* (TLE) magazine will feature a special section on India. The section will contain case histories of the application of geophysical technologies from the oil and gas, and mining industries in India. Ideally, papers considered for publication will provide data integration examples involving various data types such as 3D seismic, potential fields, remote sensing, geomechanics, petrophysics, geology, well logs, engineering data, microseismic etc., as well as examples of implementing or testing of new technology.

We have a publication limit of 8 technical papers for this special section. Additional papers are possible to be included as "digital-only", where the contents will be available online via the SEG/TLE website and only the papers' abstracts will be published in the print version of the TLE.

Authors interested in having papers published in this special section are hereby invited to submit abstracts. These abstracts are intended for the selection of papers to be considered for publication in the special India section. The abstracts should be written in English, be no longer than 300 words in length, and should not include illustrations. Abstracts are due by June 1, 2018, and authors whose abstracts have been selected will be notified by June 16, 2018.

Please send your abstracts by email to any of the following TLE Guest Editors for the special India section:
