

## President's Page

It gives me immense pleasure to write my maiden address to all the SPG members after taking over the responsibility of President, SPG-India. At this nostalgic moment, I feel great honor to take over the responsibility of society which was led by eminent geoscientists in the past.

Over the last two decades, SPG has grown remarkably and achieved the recognition in international E&P industry. SPG was successful in all its past endeavors due to active participation of its members and continued support of E&P fraternity.

Geohorizons is the true culmination of efforts of sharing technical ideas and experiences. In the past, the various topics particularly those which benefit majority were incorporated in Geohorizons. In the present scenario, the ever growing energy need with fast depleting conventional resources have forced geoscientists to look for unconventional. I wish and I request our young SPG members to contribute quality technical papers in the Geohorizons seeking guidance from the more experienced peers.

This issue includes the selected technical papers presented during the recently organized Joint workshops by SPG in association with SEG & EAGE on the theme “**Current Practice and Advances in Foothills imaging**”. It is worth mentioning here that the workshop was huge success and was well appreciated by participants.

I am very confident that, with your active support and participation upcoming SPG 2020 conference will become landmark and will provide a paramount platform to network and sharing ideas.

Looking forward to meet and interact with you at SPG 2020.

A handwritten signature in black ink that reads "Pradipta Mishra". The signature is written in a cursive, flowing style.

(Pradipta Mishra)  
President, SPG India
