

From the Editor's Desk

Dear Reader,

Greetings!

It gives me an immense pleasure to bring to you this Special Issue of GEOHORIZONS from the North American chapter of SPG. The issue is unique in the sense that it is for the first time that we have so many high quality papers - as many as eight - thanks to a combined spontaneous response to our call for technical contributions. The credit for this coordinated action goes to Professor Mrinal Sen who is a Guest Editor of this issue.

We have revived in this issue our forum, "From Another Angle" and have reprinted here the abstract of a key-note address, "The Future of People on Planet Earth: Challenges for Geophysicists", delivered by David Denham, Secretary and Director, Australian Society of Exploration Geophysicists, at the 9th SEGJ International Symposium, October 2009 at Sapporo. I am sure the issues raised by the speaker will churn your soul into some rethinking on "our social and economic paradigms".

We also take pleasure and pride in recalling in this special issue the life time contributions of several geoscientists to Petroleum Geophysics in India.

On behalf of the editorial board of GEOHORIZONS, I wish you all happy reading and a very fruitful year 2010.

C. H. Mehta
