

Society of Petroleum Geophysicists, Dehradun, India

Editorial Policy

Geohorizons publishes material of relevance to Petroleum Geophysics. Contributions can be in the form of research papers, case histories, tutorials, reviews or interpretation work. Manuscripts on fundamental geophysical principles that are relevant for exploration are also invited. The forum “Points-to-ponder” is meant for discussion on subtle questions of theoretical or practical interest normally not covered in text books or papers. Readers may contribute such a question along with an answer, if known to him. “What’s new?” is intended to convey the latest development in a field.

A predominantly mathematical paper should preferably include an illustration or example of its application. The manuscript should include at least one example of synthetic or recorded data to illustrate the technology or concept described in the paper. In addition to technical contributions, readers may submit news related to different professional societies affiliated to Society of Petroleum Geophysics, India, along with a brief write-up and photographs. Letters to Editor expressing any issue which can enhance the value of the periodical are welcome.

Technical papers, case histories, tutorials, require an abstract. Authors should confine their papers to ten (10) journal pages or fewer, including figures. The intent of the length restriction is to improve clarity by encouraging authors to organize and focus their writing.

Geohorizons encourages authors of works presented at SPG biennial conferences to submit expanded, journal quality versions of their work for consideration of publication in Geohorizons.

All contributions submitted in English are considered regardless of whether the author is a member of the Society of Petroleum Geophysicists, India. A technical contribution is accepted for publication with the understanding that (1) it has **neither been accepted for publication nor published elsewhere either in whole or in substantial part**, (2) it is **neither currently being considered by another journal nor will be submitted to another journal** while under consideration for Geohorizons. If prior submission or publication has been to a publication with a very limited audience, the Editor may choose to waive the restrictions (1) and (2). It is further also understood that: (3) the work is essentially original. Extension of an earlier work by another author, tutorial, or a review are welcome. However, **if the contribution contains any material published elsewhere, beyond what is permitted by the original publisher, the authors need to obtain due acknowledgment / permission from the original authors / publishers.** It is the authors’ responsibility to inform the Editor of any variance from (1), (2), and (3) above. **Responsibility for any infringement of Copy Rights arising from publication of the submitted papers rests solely with the authors and not with Geohorizons.**
