

Two talks by Mr. Satinder Chopra at Dehradun on “Follow your creative ideas with passion” and “Seismic Attributes”

SPG Dehradun organized two lectures by eminent geoscientist Mr Satinder Chopra, on 12-03-13 at Mini Auditorium of KDMIPE, ONGC Dehradun.

Mr Satinder Chopra, one of the founder members of SPG (1992) still becomes nostalgic about his days in ONGC/SPG and is always ready to extend help to fellow ONGCians/SPGcians at any possible opportunity. This was evident when Mr Chopra himself chose to deliver one of his popular talk “*Follow your creative ideas with passion*” which he had delivered at international forum on request, in addition to the technical talk on “Seismic Attributes”. First talk was quite new as regards the expectation of the audience but quite interesting & inspiring and gave insight into many scientific inventions, in chronological order, which were results of sheer determination and passion with which the ideas were followed despite the numerous hardships/hurdles. In a way Mr Chopra rather tried to invoke the audience for pursuing creative ideas in each individual and particularly the

young ones and insisted not to leave their creative ideas for luxury, comforts and fear.

The topic of his second talk was “Seismic attributes-adding value to 3D seismic interpretation”- a subject on which he has made a unique distinction at international level. Various seismic attributes and their applications were discussed in details.

The lectures were followed by interactive session where Mr Chopra interacted freely with the geoscientists on various topics apart from the attributes. The lectures witnessed full strength and both the lectures drew wide appreciation for their content and presentation style.

Secretary SPG, Sri N S Dangwal proposed the vote of thanks and Joint Secretary, SPG Sri C B Yadava anchored the program.
